

# *Liatris aspera*

## Rough Blazing Star

Showy and beautiful, this blazing star tolerates a range of soils, yet is drought tolerant. Contrast the purple blooms with the yellow goldenrods for a colorful late summer show. An excellent nectar source for the Blazing Star Skipper butterfly. Also attractive to goldfinches.

***Suggested Companions:*** old-field goldenrod (*Solidago nemoralis*), June grass (*Koeleria macrantha*), little bluestem (*Schizachyrium scoparium*), butterfly weed (*Asclepias tuberosa*)
